EBILL: The Optimized Energy Procurement&Administration

Overview

Ebill is Ouvert's solution for the automation of energy invoicing processes. Thanks to Ebill it is possible to quickly manage, analyze and check energy invoices. It offers budget forecasting tools and supports the evaluation and selection of energy providers.

With Ebill the whole invoice management process becomes digital: invoices are checked in a few seconds against their compliancy to:

- National regulations
- Contractual terms & conditions
- Nodes expected consumptions

and individual and aggregated reports can be generated at any time with different parameters.

Benefits

- Dramatic reduction of the invoices approval time thanks to a fully automated processing
- Easy detection and tracking of invoice errors
- Invoicing anomalies detection and budget plan support thanks to advanced analytics functionalities like the "invoicing gap lookup" and "balance forecast"
- Customizable dashboards and reports for a quick and effective communication over the invoicing process status

Features

- Invoices acquisition from different formats (XML, spreadsheet, TXT)
- Energy assets inventory (nodes, PoDs, nodes groups)
- Invoice costs inventory (contracts, accessory costs, taxes)
- Full invoice recalculation with three types of checks:
  national regulations conformity, compliance to contractual terms & conditions, invoiced vs expected vs measured consumption
- Detection of invoicing anomalies (missing/late invoices, duplicated invoices)
- Configurable alerts and notifications
- Multiple authorization profiles and assets visibility levels (all nodes, area, single node)
- Financial analysis (budget forecast, cash flow analysis)
- Customizable dashboards
- On-demand production of graphic and table reports
- Data export in graphic, PDF and spreadsheet format
- Configurable automated reports
