insite

INSITE: The Efficient Telco Network

Overview

Insite is the solution dedicated to Telco operators for the management of the performances of their networks.

Ouvert has designed Insite to provide Telco operators all means to merge the Quality of Service supervision (QoS) and the Operation & Maintenance (O&M) with the energy performance management.

Benefits

- Real-time tracking of the energy performances of single sites or group of sites with configurable alerts
- Performance benchmarking across different sites (or groups of sites) to identify inefficiencies and stimulate improvements
- Accurate forecasting to evaluate the impact of network roll-out and technology swap activities on the energy budget
- Customizable dashboards and reports for a quick and effective communication over the infrastructures efficiency status

Features

- Energy assets inventory (Sites, PoDs, Meters, Assets groups)
- Real-time data acquisition from multiple sources (IoT networks, Building Management Systems, Weather services, Invoices)
- Definition and tracking of Energy Conservation Measures
- Energy intelligence analysis: consumptions modeling, network clusterization, prediction, anomalies detection
- Configurable alerts and notifications
- Multiple authorization profiles and assets visibility levels (whole network, area, single site)
- Financial analysis (budget, forecasts of network roll-out / technology swap impact)
- Customizable dashboards
- On-demand production of graphic and table reports
- Data export in graphic, PDF and spreadsheet format
- Configurable automated reports
