

PRAGMA: The Efficient Data Center

Overview

Pragma is the solution dedicated to the management of the energy performance of Data Centers. DC Managers, Energy Managers, Project Managers will either choose to independently utilize PRAGMA IT Platform Features to verify the infrastructural energy performances against expected and take actions or they may simply engage Overt Service Centre to perform and supervise. Pragma IT Platform easily integrates with existing monitoring networks and Building Management Systems (BMS). Pragma IT Platform enables the coherent and always aligned Energy Performance Contract (EPC) Management.

Benefits

- Real-time tracking of the energy performances of a data center with configurable alerts
- Automated EPC projects monitoring according to IPMVP® guidelines to certify and guarantee the achievement of the project targets
- Performance benchmarking across different sites to identify inefficiencies and stimulate improvements
- Customizable dashboards and reports for a quick and effective communication over the infrastructures efficiency status

Features

- Energy assets inventory (Sites, PoDs, Meters, Assets tree)
- Real-time data acquisition from multiple sources (IoT networks, Building Management Systems, Weather services)
- Definition and tracking of Energy Conservation Measures
- Energy intelligence analysis: consumptions modeling, prediction, anomalies detection
- Configurable alerts and notifications
- Multiple authorization profiles and assets visibility levels (whole network, single building, specific sections, etc.)
- Financial analysis (investment KPIs, budget)
- Customizable dashboards
- On-demand production of graphic and table reports
- Data export in graphic, PDF and spreadsheet format
- Configurable automated reports
